

Benefits
 a. easy accessing
 b. maintainence becomes simple
 eg: software installation(c)

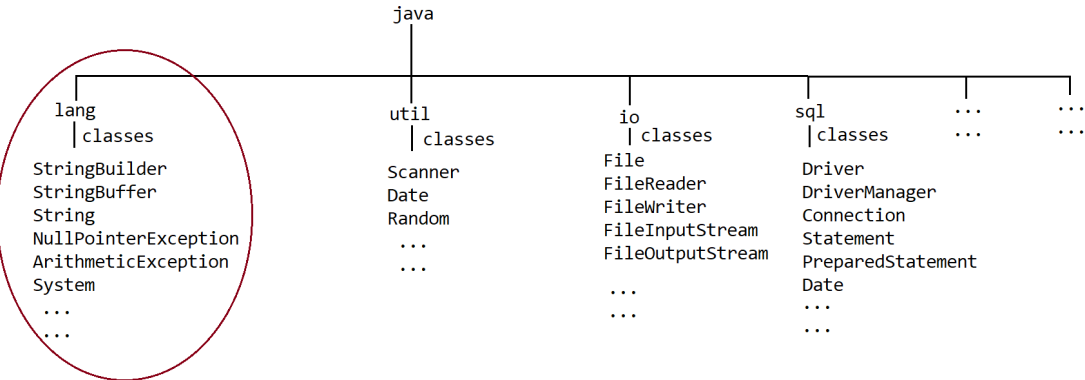

```

PackageExample
├── JRE System Library [JavaSE-1.8]
├── src
│   ├── in.neuron
│   │   ├── Main.java
│   │   ├── in.neuron.controller
│   │   ├── in.neuron.dao
│   │   └── in.neuron.service
  
```

Packaging => Grouping all the related classes/interfaces/enum in One Place.
 package => folders

How to name a package?
 It is a good programming practise to name a package as per internet domain(reverse)
 internet domain of ineuron is => ineuron.in
 internet domain of facebook is => facebook.com
 internet domain of youtube is => youtube.com

Syntax
 in.ineuron.controller
 in.ineuron.service
 in.ineuron.dao

commonly used classes
 (devlp's favourite pkg)
