```
statement-1;
try
{
        statement-2;
        statement-3;
        statement-4;
}
catch(XXX e)
{
        statement-5;
}
finally
{
        statement-6;
}
statement-7;
```

Default Exception Handler

**CASE - 1**

If there is no Exception raised.

statement-1, 2, 3, 4, 6 & 7 will be executed.
Resulting in Normal Termination.

**CASE - 2**

If an Exception is raised at statement-3 and the corresponding catch block is matched.

statement-1, 2, 5, 6 & 7 will be executed.
Resulting in Normal Termination.

**CASE - 3**

If an Exception is raised at statement-3 and the corresponding catch block is not matched.

statement-1, 2 & 6 will be executed.
Resulting in Abnormal Termination.

**CASE - 4**

If an Exception is raised at statement-5.

Resulting in Abnormal Termination.
But before that finally block will be executed.
